3.05 New and Replacement Fire Alarm Systems- High-Rise
Evacuation/Relocation Policy (2016)

SCOPE. This bulletin applies only to fire alarm systems in new high-rise buildings or replacement fire alarm systems in existing high-rise buildings.

PURPOSE. The purpose of this bulletin is to provide direction to the design community about how the San Francisco Fire Department expects notification/evacuation zones to be designed for new or replacement fire alarm systems.

ALTERNATE PROPOSALS: The Fire Department recognizes that the procedures outlined below will not accommodate every situation. Variations to the evacuation/relocation schemes outlined below will be evaluated and approved on a case-by-case basis by the San Francisco Fire Department’s plan review staff.

1. NEW HIGH-RISE OFFICE BUILDINGS

A. New high-rise office buildings (B occupancy) > 150 ft. in height. It is the policy of the San Francisco Fire Department that when the fire alarm system is installed in a new high-rise office building, the following relocation procedure shall be followed. The activation of any fire alarm initiating device will cause four floors to go into alarm: the fire floor (floor of alarm initiating device activation), two floors below the fire floor and the floor above the fire floor, except that the activation of any alarm initiating device on the 7th floor or below will cause an evacuation signal on the 7th floor and below (See Example Relocation Matrix Addendum A below). ALL stairway doors in the building shall automatically unlock under any alarm condition to allow access for relocated building occupants.

B. New high-rise office buildings (B Occupancy) 150 ft. in height or less. New high-rise office buildings that are 150 ft. or less in height may elect to use partial evacuation (a four floor zone evacuates the building) or relocation as stated above. The partial evacuation zone will include the fire floor (floor of alarm initiating device), two floors below, and the one above.

2. NEW HIGH-RISE TOURIST HOTELS AND RESIDENTIAL BUILDINGS

New high-rise tourist hotels and residential buildings (R-1 and R-2 Occupancies). When a fire alarm system is installed in a new high-rise R-1 tourist hotel or an R-2 residential building, the following procedure shall be followed. Any initiating device will cause four floors to go into alarm: The fire floor (floor of alarm initiating device), two floors below and one floor above. The occupants on those four floors will be instructed to evacuate the building. Relocation of occupants is not permitted in R-1 and R-2 high-rise buildings.
3. EXISTING HIGH-RISE OFFICE BUILDINGS (B OCCUPANCIES) OVER 150 FT. IN HEIGHT

When a new code compliant fire alarm system is installed in an existing high-rise office building that is greater than 150 ft. in height, an Emergency Voice/Alarm Communications System shall be installed and the same relocation procedure as that for new high-rise office buildings OR, alternatively, partial evacuation (four floors) shall be followed if the building is equipped with the following:

1. An automatic sprinkler system throughout,
2. Two code complying enclosed exit stairs,
3. Emergency Voice Alarm Communication System (EVACS)
4. A smoke control system that was code compliant at the time of installation,
5. Vertical shafts that are enclosed per Chapter 7 of the California Building Code.

4. EXISTING HIGH-RISE TOURIST HOTELS AND RESIDENTIAL BUILDINGS (R-1 AND R-2 OCCUPANCIES) OVER 150 FT. IN HEIGHT

When a new code compliant fire alarm system is installed in an existing tourist hotel or in an existing residential building that is greater than 150 ft. in height, an Emergency Voice/Alarm Communications System shall be installed, and the same partial evacuation procedure as that for new high-rise tourist hotel and residential buildings shall be followed if the building is equipped with the following:

1. An automatic sprinkler system throughout,
2. Two code complying enclosed exit stairs,
3. Emergency Voice Alarm Communication System (EVACS)
4. A smoke control system that was code compliant at the time of installation,
5. Vertical shafts that are enclosed per Chapter 7 of the California Building Code.

**Relocation of occupants is not permitted in R-1 and R-2 high-rise buildings**

5. ALL OTHER EXISTING HIGH-RISE BUILDINGS

All other high-rise buildings shall be evaluated on a case-by-case basis. Generally, these buildings will require complete evacuation unless the Fire Marshal determines life safety would be better served with an alternative plan of action.

**FACILITY EMERGENCY PLANS.** Facility Emergency Plans (FEP’s) shall be consistent with the fire alarm sequence of operation. Proposed FEP’s for new high-rise buildings shall be submitted with the fire alarm plans submittal for review and approval by plan review staff. For existing buildings, the approved FEP must be submitted as a reference, unless it must be revised to be consistent with the new fire alarm sequence of operation. In that case, the proposed FEP shall be submitted for review with the fire alarm plans as for new buildings.
RELOCATION AND PARTIAL EVACUATION BUILDINGS. Buildings with relocation or partial evacuation are required to meet NFPA 72 requirements for Level 2 or 3 survivability.

WARNING: DO NOT USE THIS BULLETIN WHEN DESIGNING FACILITY EMERGENCY PLANS FOR EXISTING BUILDINGS WITH EXISTING FIRE ALARM SYSTEMS. EXISTING FIRE ALARM SYSTEMS WITH VARYING NOTIFICATION ZONES MAY HAVE BEEN APPROVED. THE EXISTING SYSTEM CONFIGURATION MUST BE USED UNLESS THE ENTIRE SYSTEM IS REPROGRAMMED UNDER A BUILDING PERMIT AND ALL REQUIRED TESTING IS PERFORMED AND GRANTED FINAL SIGN-OFF/APPROVAL.

ANY EXISTING HIGH-RISE BUILDING WITH A PARTIAL EVACUATION OR RELOCATION POLICY THAT IS NOT FULLY SPRINKLERED SHOULD BE BROUGHT TO THE ATTENTION OF THE FIRE MARSHAL IMMEDIATELY.

**Addendum A: Example Relocation Matrix**

**Evacuation Voice Message:**
Two rounds of temporal 5 horn tones shall precede and follow the message - “May I have your attention, please? May I have your attention, please? A FIRE alarm has been activated in the building. Please proceed to the nearest stairwell and wait at the bottom or the floor above.”

**Relocation Voice Message:**
An alert steady tone of 1 to 3 seconds in duration followed by — “Attention, Attention, a FIRE emergency has been reported on your floor. Proceed to the nearest stairwell, walk down 4 floors and enter the building.” Shall be automatic and repeated at least three times.

**Reoccupying Voice Message:**
An alert steady tone of 1 to 3 seconds in duration followed by — “Attention, Attention, a FIRE emergency has been reported on a floor above yours. Please be prepared to receive personnel relocating to your floor” — Shall be automatic and repeated at least three times.

**FLOOR:** Fire Floor — On the fire floor and above, the fire floor will receive a relocation message. See evacuation message.

**EVAC:** An evacuation message will be broadcast on the floor.

**RELOC:** A relocation message will be broadcast on the floor.
